

Get-Properties

Table of contents

| | |
|--|---|
| 1 Description..... | 2 |
| 2 Parameters..... | 2 |
| 3 Parameters specified as nested elements..... | 2 |
| 4 Examples..... | 2 |

1. Description

The Get-Properties task requests the property view for a specified object.

2. Parameters

| Attribute | Description | Required |
|----------------|--|----------|
| depot | The project to update | Yes |
| resultproperty | Property to set with success/fail value | Yes |
| comment | Text describing purpose of update | Yes |
| passfile | File containing authentication info to server. If passfile is not specified, information from the framework.properties file is used instead. | No |

3. Parameters specified as nested elements

context

A [context](#).

4. Examples

Get the object property view:

```
<get-properties serverUrl="{viewdoc.server}"
  depot="{entity.depot}"
  resultproperty="rs"
  comment="none">
  <context direction="internal" proximity="1"
    entityName="{context.name}
entityClass="{context.type}"/>
</get-properties>
```
