comment	Text describing purpose of update	Yes
maprefuri	The mapref-uri of the object in Workbench.	Yes
id	The reference id name.	Yes

3. Examples

Queries about a setting object and then use [setting-info](#) to lookup from the value field.

```
<setting-get
  serverUrl="http://localhost:8080/itnav/"
  id="setting.id"
  depot="${depot.name}"
  resultproperty="empty"
  comment="nocomment"
  maprefuri="${setting.mapref}"/>
<!-- setting-info task can retrieve the field values from the
metadata.
  field names are:
  name, maprefuri, description, type, encrypted, value
-->
<echo>Now Calling setting-info:</echo>
<setting-info
  serverUrl="http://localhost:8080/itnav"
  refid="setting.id"
  field="value"
  comment="nocomment"
  resultproperty="setting.value"/>
<echo>Setting value is: ${setting.value}</echo>
```
